PRD: Project "Chronos-Scribe"

1. Project Summary

Chronos-Scribe is a web-based tool that translates user-uploaded text into a whimsical, pseudo-historical narrative, complete with fictional dates and archaic-sounding language. The core functionality is to transform mundane information (e.g., a grocery list, a meeting agenda) into an engaging, story-like artifact.

2. Problem Statement

Modern life is often characterized by dry, functional communication. We seek to inject an element of fun and creativity into everyday text, offering users a unique and memorable way to interact with their own data.

3. Goals

- Create a simple, intuitive user interface.
- Develop a robust text-processing algorithm that can apply different narrative "styles" (e.g., "Medieval Chronicle," "Victorian Diary," "Space Opera Log").
- Enable users to share their generated "chronicles" on social media.

4. User Stories

- As a user, I want to upload a plain-text document and have it rewritten as a historical account.
- As a user, I want to choose the specific historical era or narrative style for my text.
- As a user, I want to be able to download my generated chronicle as a PDF or image.

5. Success Metrics

- 1,000 unique users within the first month.
- Average of 3 text transformations per user.
- Positive feedback from at least 50% of users in a post-launch survey.
